Sleek, fast and innovative interface makes securing the files in your Windows environment *intuitive and easy.*

FileAudit 4 is the first and only file auditing solution **Microsoft-certified** for compliance with Windows 8 and Windows Server 2012.

FileAudit ensures **data security** and SOX, FISMA and HIPAA compliance.

IT managers can install FileAudit and begin tracking, auditing and reporting on changes in file systems **in less than three minutes**.

IS Decisions, a provider of Infrastructure and Security Management software solutions for Microsoft Windows, today announced the general availability release of Version 4 of **FileAudit**, its file audit, archiving and reporting software solution

The highlight of FileAudit 4 is its intuitive, touch-ready user interface comprised of "live tiles," which link to the solution's features and update in real time. It was designed to make file auditing faster, smarter and more efficient — regardless of whether users are working on PCs, laptops or tablets.
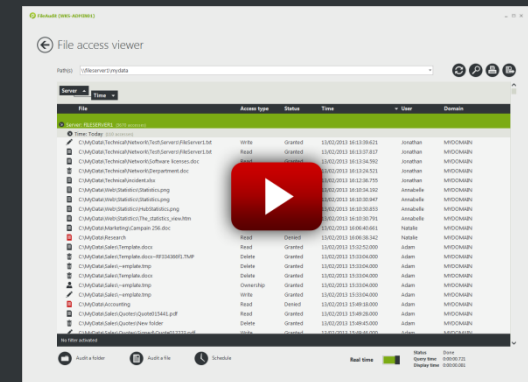

FileAudit 4 is also the first and only file auditing solution Microsoft-certified for compliance with Windows 8 and Windows Server 2012.

Increasing mobility and remote working trends can make it challenging for IT to protect sensitive data and ensure compliance with industry regulations such as SOX, FISMA and HIPAA. Manually monitoring and auditing file access (and access attempts) across Windows Servers is time-consuming and overwhelming. With a simple, agentless deployment , IT managers can quickly install FileAudit and instantly protect all file servers in their Windows environment without intrusion or the need for deployment on individual servers. Users are up and running with FileAudit and monitoring, archiving and reporting on file access in less than three minutes.

Real-Time Monitoring of sensitive files and folders constantly examines and records read/write/delete accesses (or access attempts), file ownership changes, and permission modifications so IT or management can immediately address any inappropriate accesses.

Automatic Email Alerts triggered by predetermined access events (e.g., access denied, file deletion, specific user or file access, etc.) provide instantaneous notification of a potential security breach.

Customized File Server Intelligence delivers an interactive, graphical access summary, allowing IT to ensure security in real-time and provide specified recipients with regular email delivery of reports customized according to multiple criteria (e.g., path, file type, acess type).

Centralization, Recording and Long-Term Archiving of all file access events occurring on one or several Windows systems generates an always-available, searchable and secure audit trail.

Ease of use and user-specific rights management means that even non-IT executives (and external auditors) can use FileAudit without breaching security protocols. Should a CPA or other auditor need to evaluate a company's internal controls and reporting, he can find all file access-related data without time-consuming meetings and requests for the IT department.

According to feedback from initial beta users, FileAudit4 has proven to be a remarkably intuitive and effective file auditing tool with a simple, quick install process and an innovative interface.

> *The install and initial configuration of FileAudit4 was a breeze and only took a few minutes. It walks you through all the tasks required to ensure successful real-time auditing.*

Robert Wagner II - IT Systems & Support Administrator at *Asahi Kasei Bioprocess, Inc.*

"The combination of power and simplicity in FileAudit 4 makes it easy for both IT and business line managers to ensure the security and integrity of their most sensitive data and documents," said François Amigorena, President and CEO of IS Decisions. *"It delivers the precise statistics needed to perform IT forensics and enforce regulatory compliance in an intuitive solution that can be installed and ready for use in less than three minutes."*
