

## IS Decisions<sup>®</sup> opens UserLock<sup>®</sup> 5.0 Beta Testing Program

UserLock<sup>®</sup> secures access to Windows networks by restricting simultaneous sessions, by limiting user access to the network and by providing administrators with remote session control, alert options and advanced reporting for session analysis.

**Biarritz, February 25<sup>th</sup>, 2009:** IS Decisions, French security software vendor, today announced the launching of UserLock 5.0 Beta-Testing Program.

UserLock is a unique software solution that allows system administrators to:

- prevent or limit concurrent sessions,
- limit user access to the network per workstation or customizable IP addresses range,
- set time restrictions,
- be provided with session control, alerts and full connectivity analysis and reporting features.

More than 500,000 UserLock licenses are currently in use by hundreds of security demanding international organizations including:

*US Department of Justice, BAE Systems, US Navy Marine Corps, US Department of Veterans Affairs, US Bureau of Alcohol, Tobacco, Firearms & Explosives, NY State Organized Crime Task Force, US State Department, Lockheed-Martin, Raytheon, United Nations Organization, Banco Santander, ...*

### **WHAT IS NEW IN USERLOCK 5.0 BETA?**

---

UserLock 5.0 beta comes with numerous enhancements and new features, including:

- entirely revamped Graphical User Interface (console and Web)
- dynamic display of the Active Directory tree
- protection of RAS and VPN (RRAS and RADIUS) sessions
- protection of Wi-Fi Access Points
- ...

### **HOW TO JOIN USERLOCK 5.0 BETA-TESTING PROGRAM?**

---

IT professionals interested in joining UserLock 5.0 Beta Testing Program just have to complete the brief registration process on IS Decisions' Web site:

<http://www.isdecisions.com/en/software/userlock/beta-5.htm>

They will be sent detailed information and provided with personalized Technical Support during their evaluation.

### **ABOUT IS DECISIONS:**

*IS Decisions, founded in 2000 and based in Biarritz (France), specializes in editing security and change management solutions for Microsoft® Windows® infrastructures.*

*Software developed by IS Decisions cover both domains with the following features:*

**Security**, by providing network administrators with the tools necessary for

- proactive system auditing and analysis,
- enhanced patch / application / data deployment and system action,
- network access security, management and reporting,
- sensitive data and process monitoring and enhanced alert triggering.

**Change Management**, by giving network administrators the ways and means to easily and rapidly generate and maintain an updated, comprehensive knowledgebase of all managed resources, and by providing the technology to analyze, monitor and instantly intervene on these resources.
